

**THE TOP CHOICE FOR YOUR HOME'S BOTTOM LEVEL**

- The unmatched durability of concrete
- The look of real stone
- The real value today—and in the future

Choosing window wells for your home is a deeper process than you may have thought. After all, the products you select will not only support and protect your windows—you'll be looking at them for as long as you own your home. When you build, consider the strength and beauty you'll get from Owell Precast window wells.

#### Created from a substance that will last

Window wells from Owell Precast are made from concrete—just like your home's foundation. So you know they won't move, warp or fade over time.

- Won't buckle or shift like aluminum
- Proprietary foundation installation (not flimsy mountings)
- No sun UV damage like composite or fiberglass products

#### A view you'll look up to

Owell window wells may be tough, but they're easy on the eyes. You can choose from a smooth finish or attractive stone patterns. Natural concrete provides a neutral background that helps reflect light into your basement. Or, Owell can stain the finish to match your home's architectural look. With available customization, you can even size Owell products to fit non-standard windows—or even multiple windows for an unobstructed view.

#### An investment in time and money

Owell Precast window wells are similar in price to fiberglass and composite options. But only with concrete will you find the strength, durability, and aesthetic longevity that will add to your home's value over time. What's more, standard Owell window wells are ready right now. We can install them in a matter of days (no need for extra contractors) to keep your home-building process timely and cost efficient.

#### Order from Owell today

Call us today to request a quote—or an immediate installation. Because with Owell Precast, your basement view is looking up.
